

innoquest

In pursuit of science, innovating for life

SERVICE CATALOGUE

2023 Edition

innoquest

Innoquest's visual identity symbolises a convergence of pathology and technology, both of which are core to Innoquest's differentiating edge.

By combining the coding language of '1's and '0's and the cocci, bacilli and spirilli shapes found in bacterial cell structures under the microscope, a unique typeface emerges to define Innoquest's new DNA.

The new identity captures the morphologic changes and signals the merger, transformation and creation of a new pathology lab:
in pursuit of science, innovating for life.

The spectrum of Blue conveys the qualities of trust, integrity and credibility, which are ideal values for a company set in the 21st century.

OUR VISION

To be the eminent innovator and leader in advancing new frontiers in medical testing and diagnostics.

OUR MISSION

To transform healthcare and improve human condition.

OUR PURPOSE

To impact and save every patient's life.

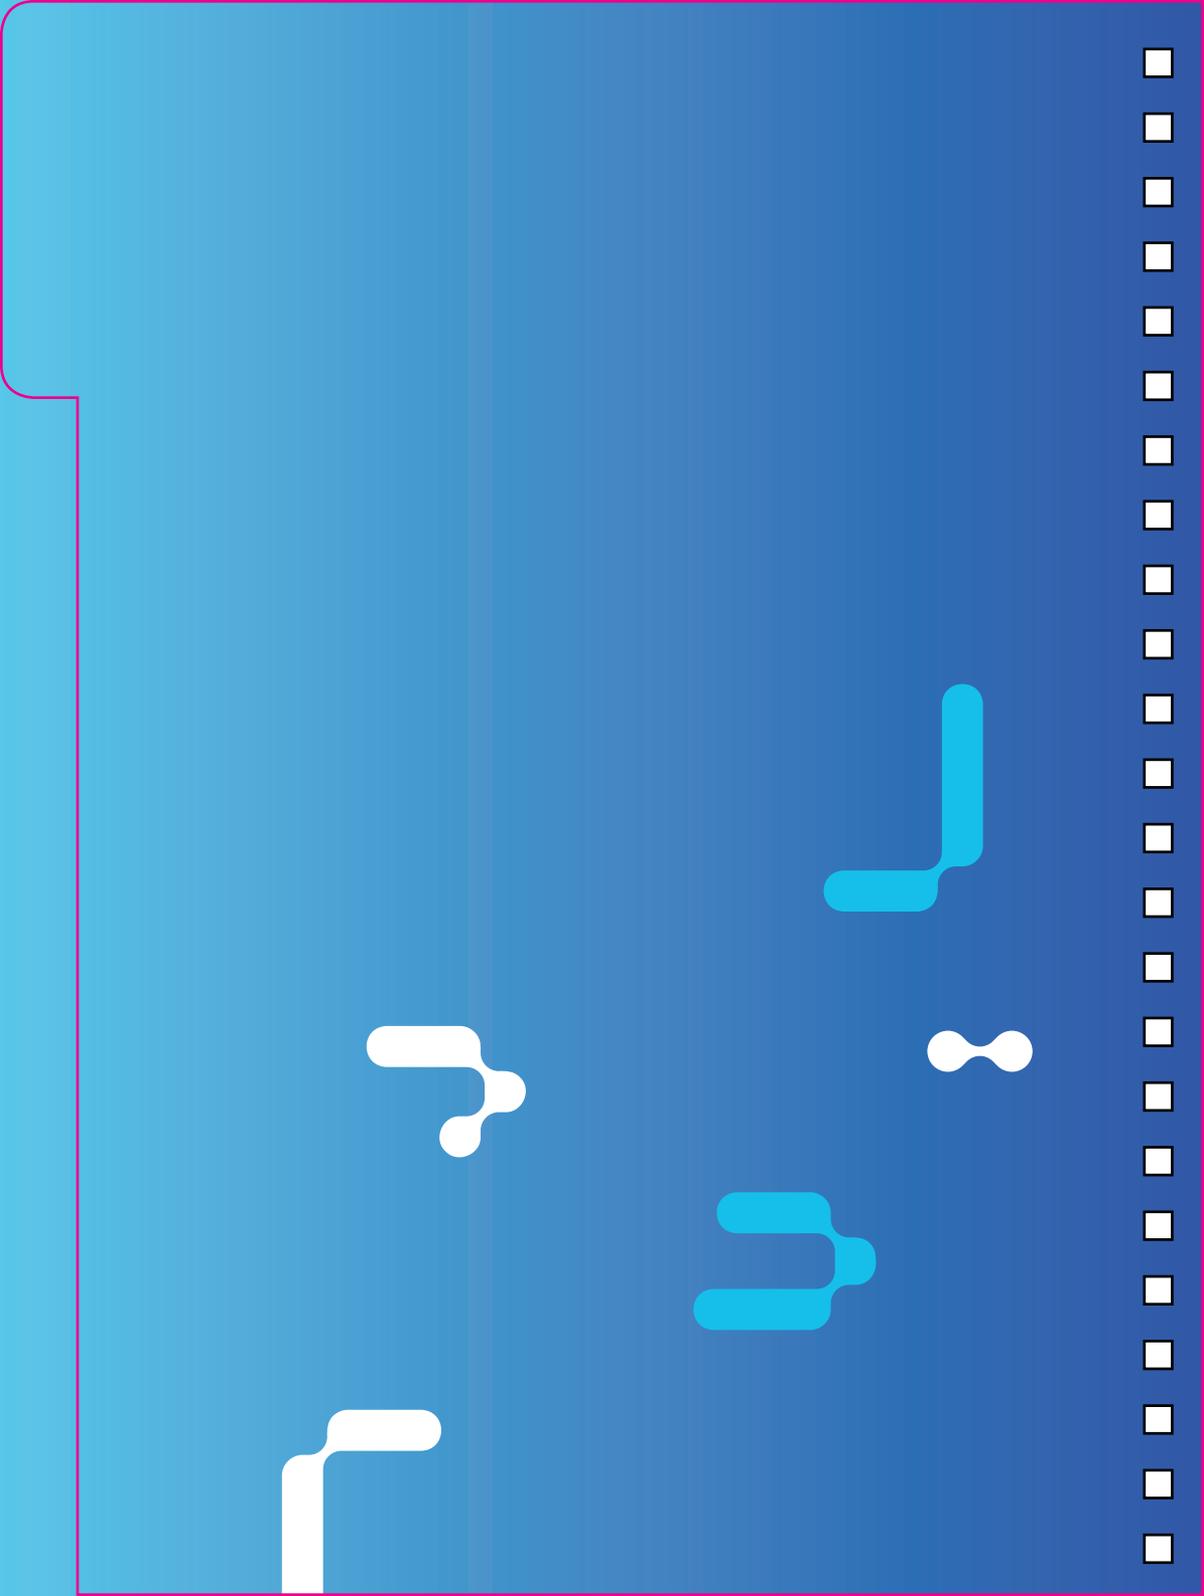

inoquest

In pursuit of science, innovating for life

INTRODUCTION

INTRODUCTION

FOREWORD

Dear Valued Partners

Happy New Year!

With the reopening of China and barring a significant antigenic shift, we are optimistic that after three challenging years of navigating the Covid pandemic we can finally expect a return to new global covid normal.

Covid-19 forced **Innoquest** to prioritise national interest priorities over the last three years. Many of our employees played a significant role in executing Singapore's management of Covid. In recognition of this, 19 Innoquest employees were specifically recognized by the Prime Minister's Office with Covid Resilience Medal for their services.

Unfortunately, this focus on Covid has been at the expense of executing many of initiatives and activities around our core diagnostic offering and our service levels have paid the price. With Covid finally in the rear-view mirror, we are looking forward to not only to remedy remaining kinks from the Innovative Quest merger but are also implementing a raft of planned initiatives around technology, workflows and new offerings that will not only bring us to pre-pandemic service levels but will endear us as your trusted and preferred partner in a Singapore that is fervently focused and prioritising preventive medicine, digitization and sustainability.

Our transformation will not be a one-year affair. Many of the advancements will be a multi-year journey but we are committed to delivering the necessary investments and enhancements to ultimately benefit you and your patients. Our framework of ideals have not changed. They remain, to be:

- 1. The laboratory of the future.** This means investing in new technologies, processes, systems and infrastructure. In 2023, we will be enabling our own electronic platform with e-order and e-result capability amongst other functions.
- 2. Medically managed.** We will continue to be clinician centric and clinician led and bring to market products which support clinicians in their decision making. We see ourselves always as another branch of medicine and see each of you as our colleague. The question that constantly drives us: "How can we help you better with your patients?"
- 3. Delighting the end-users** from both the clinician and patient perspective. In 2023, we are working specifically on improving reports (form, content, delivery) and the logistics experience.
- 4. More sustainable.** We are committed to do our part. We still use too much paper, plastic, ink and energy printing reports and moving samples, reports and consumables. Some things we will do on our own in subsequent memos we will detail how we as partners will reduce our carbon footprint.

We understand that each clinical practice is different and requires a bespoke service. We are listening to your feedback and making the changes to our platform to enable mass customisation. We will continue to thrive for and invest into the highest levels of quality and service.

Please continue to give us feedback. It is how we improve.

Thank you for your support of **Innoquest**. I wish you a successful, prosperous and positive 2023.

Kind Regards

Thomas Halusa
Chief Executive Officer

LICENSES & ACCREDITATIONS

Licensed by the Ministry of Health in Singapore under the Private Hospitals and Medical Clinics Act (Chapter 248), Innoquest is the only private and comprehensive non-hospital-based medical laboratory locally to have attained dual international accreditation for quality management.

Innoquest main laboratory at StarHub Green and its satellite laboratory at Paragon Medical have been accredited by both the College of American Pathologists (CAP) and the Singapore Accreditation Council through the Singapore Laboratory Accreditation Scheme (SAC-SINGLAS ISO 15189:2012). Innoquest achieved CAP accreditation in 2016 and has been SAC-SINGLAS accredited since 2008.

Our CAP accreditation applies to the following areas:

- Anatomic Pathology Processing
- Bacteriology
- Body Fluid Analysis
- Chemistry
- Coagulation
- Cytology Processing
- Cytology Screening
- Director/Organization Assessment
- Gynecological Cytopathology
- Haematology
- Immunology
- Intraoperative Consultation
- Laboratory General
- Molecular Microbiology
- Mycobacteriology
- Mycology
- Non-Gynecological Cytopathology
- Parasitology
- Special Chemistry
- Surgical Pathology
- Toxicology
- Urinalysis

Our ISO 15189 accreditation applies to the following areas:

- Biochemistry
- Special Chemistry (Whole Blood, Serum, Urine (Random) and Urine (24 hours))
- Immunology (Tumours, Thyroid, Infectious Diseases, Fertility, Anaemia)
- Haematology (Transfusion Medicine, Morphology, Haemoglobinopathy, Coagulation Studies, Fluid Analysis, Glycosylated Hb)
- Serology
- Microbiology
- Molecular Diagnostics
- Cytology
- Histopathology

LICENSES & ACCREDITATIONS

Under the Health Promotion Board's (HPB) Screen for Life initiative, Innoquest attained the status of a certified laboratory for CervicalScreen Singapore in 2004, and since 2016, Innoquest has been certified to process Faecal Immunochemical Test (FIT) samples as part of the National Colorectal Cancer Screening Programme.

Additionally, Innoquest participates in multiple external quality assurance programmes including:

- Royal College of Pathologist of Australia (RCPA)
 - Immunology
 - Serology
 - Microbiology
- National Proficiency Testing Scheme for HbA1C
- National Proficiency Testing Scheme for Malaria Parasite and Acid Fast Bacilli
- National Proficiency Testing Scheme for HIV
- National Proficiency Testing Scheme for ABO Group and Rhesus
- Interlaboratory Comparison Program for Metals in Biological Matrices by the Centre for Toxicology of Quebec (CTQ)
- UK NEQAS For Trace Element Scheme
- The German External Quality Assessment Scheme (G-EQUAS) for Analyses in Biological Materials
 - Aluminium
 - Zinc
 - Arsenic
 - Cadmium
 - Copper
 - Lead
 - Manganese
 - Mercury
 - Nickel
 - Selenium
 - tt-muonic Acid

SERVICE INFORMATION

SERVICE INFO

SERVICE INFORMATION

Innoquest, the only dual accreditation private laboratory from the College of American Pathologists (CAP) and Singapore Accreditation Council (SAC - Singlas), is proud to be your trusted partner to support you in making key healthcare decisions and delivering quality patient care.

1. LABORATORY LOCATIONS

Innoquest Main Laboratory:

StarHub Green
67 Ubi Avenue 1, North Wing,
#07-01 to 07, 09 & 10
Singapore 408942
Tel: 6275 5501 Fax: 6277 0220

Innoquest Satellite Laboratories:

The Paragon
290 Orchard Road
#17-07/08/09
Singapore 238859
Tel: 6737 2788 Fax: 6887 3249

Royal Square at Novena
101 Irrawaddy Road
#07-02
Singapore 329565
Tel: 6734 0778 Fax: 6734 0773

Innoquest Hospital Laboratories:

Farrer Park Hospital
1 Farrer Park Station Road
#02-01 Connexion
Singapore 217562
Tel: 6705 2822 Fax: 6705 2941

Thomson Medical Centre
339 Thomson Road, Level 4
Singapore 307677
Tel: 6350 8804 Fax: 6250 3032

Innoquest Collection Centre:

Camden Medical Centre
1 Orchard Boulevard
#09-06/07
Singapore 248649

6277 0221 / 6277 0222

5. SUPPLIES

- 5.1 Selected basic supplies such as specimen containers, syringes, needles and request forms will be supplied without charge.

6. COLLECTION OF SPECIMENS & SPECIMEN STORAGE

- 6.1 In order to ensure the optimum condition of all specimens for the most accurate test results, please refer to the respective sections of our sample collection manual online before collecting specimens from a patient. Special requirements and special instructions are to be clearly indicated on the request form. All patient specimens must be accompanied by a request form and each specimen container must be labelled correctly with at least 2 identifiers (Name or NRIC/FF) to prevent errors in results reporting.
- 6.2 Request forms must include the following information:
- Full name of patient
 - Patient's identification number (NRIC or Passport No.)
 - Date of birth
 - Gender (male or female)
 - Source of specimen (if not blood)
 - Date and time of collection
 - Doctor's name and clinic stamp.
 - Initials of requesting doctor
- 6.3 DO NOT store blood specimens in the freezer.
- 6.4 DO NOT send specimens in syringes as they are hazardous to those handling the specimens.
- 6.5 If blood specimens are drawn from a patient in the closing hour or in the evening, please ensure that the blood containers are properly packed and stored.
- 6.6 Blood/urine specimens **CANNOT** be kept overnight for tests such as Acid Phosphatase, Glucose, Electrolytes, Calcium, Phosphate, Urine FEME and Urine Culture. Please check with us for full details.
- 6.7 For Chemistry and Immunology tests, unless required by specific tests, all blood specimens should be collected using SST II tube.
- 6.8 Laboratory results and reference ranges may vary between laboratories.
- 6.9 Turnaround time (TAT) indicated are based on best estimated. TAT may be updated without prior notice.

7. SPECIMEN REJECTION POLICY

HAVE YOU CHECKED THE FOLLOWING BEFORE SENDING OUT A SAMPLE?

Our Specimen Rejection Policy

Specimens would be rejected in the following cases:

Unlabelled specimen

Specimen sent in wrong container

Inappropriate container

Wrong preservative for test

Incorrectly labelled specimens

(Mismatched Specimen and Form)

Insufficient sample volume

(Volume not to the mark)

e.g. Citrated blood

Broken Container

Leaking Container

Split Sample

Highly contaminated sample or request form

Specimen received in syringe

Help us help you to avoid delays or rejected specimens

SERVICE INFORMATION

8. RESULTS TURNAROUND TIME

- 8.1 For urgent samples: 2 hours to 4 hours (during office hours) after receipt of samples at the laboratory. (FBC, Dengue tests etc)
- 8.2 For routine samples: 1 to 5 working days. This does not include scheduled tests and send-out tests.

9. PAYMENT

- 9.1 Credit term is 30 days from date of invoice.
- 9.2 The credit policy will be strictly enforced. Please settle your invoice timely.
- 9.3 Payment Method
i) Bank Transfer Payable to : Innoquest Diagnostics Pte Ltd
HSBC A/C No. : 052-768322-001
Bank Code/Branch Code : 7232/052
ii) PayNow UEN : 199600742ZH01
Please email all payment details to
finance@innoquest.com.sg to avoid payment discrepancy
- 9.4 We accept credit card payment for referred walk-in patients.”
- 9.5 Our Commercial Managers are authorised to collect payments on behalf of the company. Alternatively, you can mail your payments directly to our office at:
Innoquest Headquarter Office
Starhub Green
67 Ubi Ave 1, South Wing,
#02-08 to 09
Singapore 408942
Tel: 6235 6955
- 9.6 All prices listed are not inclusive of GST.

10. SEND-OUT TESTS

Send-out tests are outsourced to reference laboratories in Singapore and Innoquest's international strategic partners. Results turnaround time is between 7 to 14 working days. Longer turnaround time will be conveyed accordingly.

Please call 6430 3494 / 96 or 6430 4562 / 63 for more information on our send-out tests and prices.

11. GUIDELINES FOR HIV TESTING

“Samples reactive for HIV screening test must be repeated and repeated reactive samples and those with equivocal results must be referred to the National HIV Reference Laboratory, Department of Pathology, Singapore General Hospital (SGH) for confirmation. The reactive results of the HIV screening test are NOT to be released to the patient or the referring doctor before they are confirmed by the National HIV Reference Laboratory. Laboratories shall also ensure that a sufficient amount of blood is taken for the HIV screening test so that there is a sufficient amount of the blood sample (at least 1.5cc of serum/plasma) to be sent to the National HIV Reference Laboratory for confirmatory tests should the HIV screening test produce reactive results.”

[Doc No. MH71:03/09 02-01/96 (HV), Vol. 10]

In light of the directive from the Ministry of Health, clinical laboratories must ensure sufficient amount of blood is received for the HIV screening test. A minimum of 4ml of blood must be received by the laboratory to conduct the HIV screening test, repeats and confirmatory test for reactive cases at the National HIV Reference Laboratory.

The Ministry’s guidelines with regard to HIV screening by a PHMC-licensed laboratory stipulate that all HIV reactive cases **MUST** be sent to the National HIV Reference Laboratory at SGH for the **confirmatory** test.

HIV confirmatory test is chargeable for all patients based on SGH’s prevailing rate (April 2017).

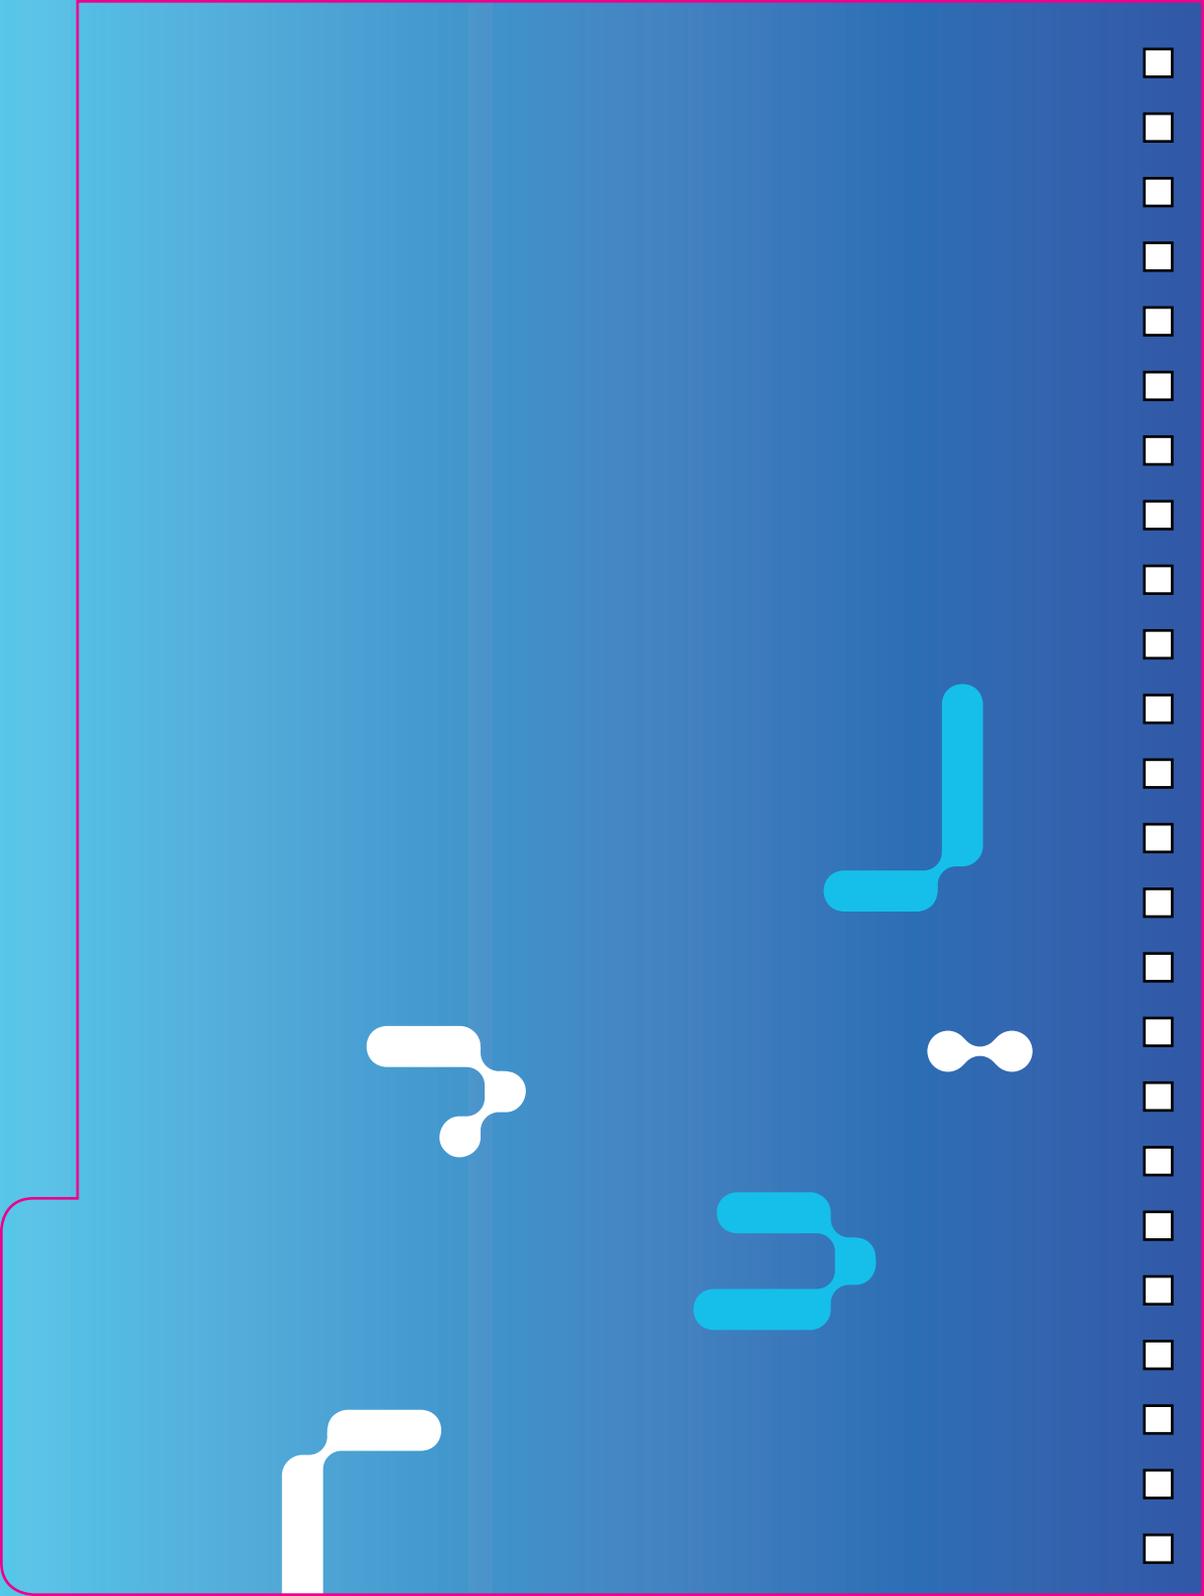

innoquest

In pursuit of science, innovating for life

USEFUL LABORATORY & MEDICAL INFORMATION

USEFUL LAB &
MEDICAL INFO

SPECIMEN COLLECTION AND HANDLING

1. Introduction

Innoquest is committed to providing timely and accurate results to support your clinical practice in making key healthcare decisions and delivering quality patient care.

The provision of accurate diagnostic results is contingent upon the quality of the specimen received, together with legible and appropriate clinical history in the accompanying request form.

Appended below is information on sample collection and handling to facilitate quality specimen collection and ensure the integrity of test results.

2. Specimen Collection Containers

2.1 Vacutainer Tubes

APPROPRIATE USE OF VACUTAINER TUBES		
Cap Colour	Tube Type	Laboratory Use
Light Blue 	Sodium Citrate, 3.2% (fill samples up to the mark)	Coagulation Test
Red 	Clot Activator, Plain	Lipid, HIV, Virology, Antibody Identification, Cold Agglutinin
Gold 	Clot Activator, Plain with GEL, SST II	Biochemical, Virology, Immunology, Protein Electrophoresis
Royal Blue (Plain) 	Trace Element with Clot Activator	Aluminium, Copper, Selenium, Zinc, Manganese, Nickel, Cobalt, Chromium, Thallium

SPECIMEN COLLECTION AND HANDLING

Cap Colour	Tube Type	Laboratory Use
Green 	Lithium Heparin	Tropinin T, Stat K
Royal Blue (EDTA) 	Trace Element K ₂ EDTA	Arsenic, Cadmium, Lead, Manganese, Mercury, Chromium, Selenium, Thallium, Zinc
Lavender 	K ₂ EDTA	FBC, HbA1c, Direct Antiglobulin, Antibody Identification, Hb Electrophoresis
Grey 	Sodium Fluoride	Glucose, GTT, Lactate Acid
QuantIFERON®-TB Gold Plus (set of 4 tubes)	To order collection containers (set of 4) at least 3 working days in advance.	Send within same day. Charges apply for rejected samples for wrong collection procedures or mislabelling.

2.2 Other Collection Containers & Supplies

APPROPRIATE USE OF CONTAINERS & SUPPLIES

Description	Type	Laboratory Use	Gentle Inversion/ Remarks
Blood Culture Bottle	A set of green (aerobic) and orange (anaerobic) cap BacT/ALERT blood culture bottles (send bottles in pairs)	Aerobic & Anaerobic blood culture	Collect 10 ml per bottle.

SPECIMEN COLLECTION AND HANDLING

Description	Type	Laboratory Use	Gentle Inversion/ Remarks
Capillary Tube	Heparinised tube (collect 2-3 tubes)	For neonatal bilirubin test	-
Charcoal Swab	Amies transport medium with charcoal (formulated to maintain microorganisms viability)	For GC and N Gorrhoeae culture	Do not refrigerate.
Culture Swab	Blue cap swab with gel medium	Bacterial culture, NSU and mycoplasma cultures. Also suitable for aerobic & anaerobic organisms	-
Dry Swab	Red cap sterile cotton tip (without gel medium)	For Herpes PCR	-
Roche Cobas Uni Swab	Yellow Cap Sterile Cotton tip with media	Chlamydia Trachomatis and Gonococcol PCR	-
Formalin 10%	500ml plastic bottle	For fixation of histology specimen	-
Glucose Drink	75mg glucose drink	For Glucose Tolerance Test	-

SPECIMEN COLLECTION AND HANDLING

Description	Type	Laboratory Use	Gentle Inversion/ Remarks
Cytospray	200ml cytospray bottle (use for up to 200 slides)	For fixation of smears	-
Pap ThinPrep Vial	Thinprep collection Vial with cytobrush	Liquid-based cytology PAP test	-
Urine Container (50ml)	Sterile plastic container with screw cap	For analysis of urine, body fluid, sputum, culture, skin scrapping, fungi, etc.	<p>Urine: Minimum 20ml</p> <p>Seminal analysis test:</p> <ol style="list-style-type: none"> 1. The sample should be collected after a minimum of 2 days and a maximum of 7 days of sexual abstinence. If additional samples are required, the number of days of sexual abstinence should be as constant as possible at each visit. 2. The man should be given clear written and spoken instructions concerning the collection of the semen sample. These should emphasize that the semen sample needs to be complete and that the man should report any loss of any fraction of the sample.

SPECIMEN COLLECTION AND HANDLING

Description	Type	Laboratory Use	Gentle Inversion/ Remarks
			<p>Specimen should be accompanied with the following information:</p> <ol style="list-style-type: none"> 1. Method of collection 2. Type of specimen container 3. Days of abstinence 4. Collection or transport problems (eg, incomplete specimen, exposure to temperature extremes) 5. Time of specimen receipt and analysis <p>Sputum Cytology: A fresh, early morning specimen produced from deep cough. No fixative required.</p>
Urine Container (24hr Urine Container)	White container with screw cap	For 24hr urine collection analysis.	-
Stool Container	Non-sterile container with attached spatula and screw cap	Stool examination and culture	To use stool container provided by the laboratory
Syringes & Needles	Disposable and individually sealed syringes & needles. Syringes: 5, 10 & 20mL ml. Needles: 21G & 22G	Blood collection and transfer blood into vacutainer tubes	-
Vacutainer needle	Individually sealed disposable needle (100/box - Green: 21G. Black: 22G)	Blood draw facilitated by vacutainer holder	-

SPECIMEN COLLECTION AND HANDLING

Description	Type	Laboratory Use	Gentle Inversion/ Remarks
Vacutainer holder	Yellow plastic collection holder	Fix vacutainer needle to holder to collect blood using vacutainer tubes	-

3. General Specimen Preparation

3.1 Specimen Preparation

- Follow specific instructions in profiles and single test listing.
- Ensure correct collection containers are used and adequate amount of specimen is collected.
- Label request forms and specimen containers correctly to prevent specimen rejection.
- Verify with at least two identifiers to ensure specimen is collected from the correct patient.
- Mandatory information required by the Lab for HIV screening: Patient's nationality, screening purpose and residency status. Submit a minimum of 4ml blood for HIV testing, repeats and confirmatory test for reactive cases at the National HIV Reference Laboratory.

3.2 Important Considerations for Blood Collection

- Identify patient correctly and use appropriate collection tubes.
- Ensure patient fasts if required for at least 8-12 hours. Plain water is allowed.
- Discourage prolonged fasting.
- Avoid haemolysis by adopting good blood taking techniques.
- Avoid leaving tourniquet on patient's arm for extended time.
- Ensure optimal anticoagulant effect.
- Protect photosensitive specimen from light.
- Send for prompt specimen processing.
- Keep LDH isoenzymes specimen at room temperature and do not chill it. ACTH request to collect in EDTA tube and send between 8am to 10am (within one hour in ice).
- Sample request that includes APTT must reach the lab within 2 hours of blood collection and processed within 4 hours, otherwise the result may be compromised.

SPECIMEN COLLECTION AND HANDLING

3.3 Unacceptable Blood Specimens

- a. Incorrect identification of patients or specimen
- b. Clotted blood specimen
- c. Insufficient volume
- d. Use of outdated supplies
- e. Contaminated specimen
- f. Use of incorrect blood tube
- g. Use of urine/stool non-sterile and non-standard containers not supplied by the Lab

3.4 Microbiology Specimen

- a. Refer to the test listing for specific instructions and types of sterile containers/ devices to use.
- b. Proper collection is vital to avoid contamination from indigenous flora.
- c. Provide information on clinical presentation and specimen source/site on request form.
- d. Whenever possible, collect specimens before administering antimicrobials.
- e. Specimen container must be labelled with the patient's details.
- f. Prompt delivery of specimen to the laboratory to ensure viability of pathogens.
- g. If a delay is unavoidable, store specimen at 2-8°C except for blood, anaerobic cultures, specimens for *Trichomonas vaginalis* and *Neisseria* species, and cerebrospinal fluids.
- h. If *Neisseria gonorrhoea* is suspected, submit specimen on a charcoal swab (black cap).

3.5 Blood Culture

- a. Collect blood culture specimen using sterile techniques to reduce the chance of contamination.
- b. BacT/ALERT® PF Plus for pediatric blood Culture bottle. Recovery is improved with the recommended volume of 4ml.
- c. BacT/ALERT® FA Plus Aerobic and/or BacT/ALERT® FN Plus. Recovery is improved with the recommended volume of 10ml.
- d. Transport inoculated BacT/ALERT blood cultured bottles to the Lab as soon as possible.
- e. Two to three sets of cultures per patient collected by separate venipuncture sites are recommended by the Clinical and Laboratory Standards Institute (CLSI).

3.6 Fluids and Effusions

- a. Send aspirate in a sterile container. Refrigerate at 2-8°C if delay in transportation is anticipated except for cerebrospinal fluids.
- b. For large volumes, let it stand for 30 mins, pour away top portion of fluid and transfer the bottom 50ml to a sterile container. Send to the Lab as soon as possible.

3.7 Gastrointestinal Specimens

- a. If transport delay is anticipated, refrigerate specimen at between 2-8°C.
- b. Use charcoal swab (black cap) if rectal swab is used for *Neisseria gonorrhoea* culture.
- c. Stool specimen: Patient should collect stool specimen directly into a clean stool container provided by the Lab. Stool specimen sent in other forms e.g. toilet tissue, plastic bag or other container will be rejected.

3.8 Urine Specimens

- a. Collect mid-stream urine (50ml) into a sterile urine container.
- b. DO NOT submit specimens collected from a bedpan or urinal.
- c. 24hr urine sample is not suitable for culture.
- d. Refrigerate specimen if transportation delay is expected. Do not freeze specimens.

3.9 ThinPrep Pap Test

- a. Obtain adequate sampling from the cervix using the cytobrush.
- b. Rinse the brush in the PreservCyt solution vial. Discard the brush and do not leave it inside the vial.
- c. Tighten the vial cap so that the torque line on the cap passes the torque line on the vial.
- d. Label vial with patient's name and ID.
- e. Provide relevant clinical information and medical history on the request form.
- f. Unlabelled vial will be rejected and discarded. Clinic will be informed of the rejection.

SPECIMEN COLLECTION AND HANDLING

3.10 Histopathology Tests

- a. Label each specimen and include the date and time when the specimen is taken.
- b. Send specimens in clean containers with 10% buffered formalin.
- c. Multiple small specimens such as gastrointestinal biopsies should be mounted on a piece of filter paper and properly labelled. Biopsies from different segments of the GI tract to be separated in different containers.
- d. Large specimens should be opened, the contents cleaned out and specimen completely immersed in formalin. Containers must be tightly secured.
- e. For specimen which may require immunohistochemistry tests, indicate on request form specimen excision time and formalin immersion time.
- f. Do not crush specimens with forceps, haemostats or other instruments. Avoid using cautery.
- g. Label each container with the patient's name, NRIC/admission number, source and nature of specimen.
- h. For specimens where orientation is important, mark the specimen, e.g. axillary tail of mastectomy specimens, N2 lymph node of gastrectomy specimens, most proximal lymph node of colectomy specimens.

3.10.1 Fine Needle Aspiration

- a. Fix 2-4 slides immediately (within a few seconds) using cytology spray fixative or by immersing slides in 95% ethyl alcohol for 20 minutes.
- b. If air-dried (unfixed) smears are also prepared for same patient, differentiate fixed and unfixed slides in separate containers. Indicate "A/D" for air-dried slides.
- c. Provide clinical information. Also indicate site of aspiration, clinical diagnosis, whether lesion is solid or cystic, and gross appearance of aspirate, if applicable.

3.11 Molecular Biology

3.11.1 Chlamydia & Gonorrhoea PCR

- a. Male patient: Urine preferred. Collect 15-20ml morning first voided urine in a sterile container or urethral swab, dry swab (red cap).
- b. Female patient: Endocervical / HVS in dry swab (red cap) container. Send to the Lab as soon as possible.
- c. Collect specimen using dry swab (red cap) for rectal, conjunctival and throat specimen.
- d. Refrigerate sample until transfer to the Lab. Do not freeze specimen.

3.11.2 HBV DNA PCR

- a. Collect 2x 3ml EDTA blood for HBV DNA test.

SPECIMEN COLLECTION AND HANDLING

3.11.3 HPV DNA PCR

- a. ThinPrep vial.

3.11.4 Real Time HSV PCR

- a. Use dry swab (red cap) for genital swab or oral swabs collected from mouth, tongue, lips, pharynx and/or eyes.

3.11.5 VP11 (Vaginitis Screen)

- a. Use dry swab (red cap) for vaginal fluid specimens for patients with symptoms of vaginitis/vaginosis.

3.12 Urine Collection Procedure

3.12.1 Random & Time Urine

- a. Random urine specimens may be collected at any time.
- b. Timed urine specimens are obtained at designated intervals, from "time zero". Clearly note the time of collection on each container and on the request form.

3.12.2 24-Hour Urine

- a. 24hr urine specimens require collection using a 24hr urine container.
- b. Patient to discard the first morning urine. 24hr collection begins after this void.
- c. Record date and time on the urine container provided (e.g. 8am, 8/1/2017).
- d. The next morning at the same time, collect void urine into the bottle as the final urine collection for the 24hr period.
- e. Unpreserved urine specimens should preferably be refrigerated during the period of collection to prevent microbiologic decomposition and chemical changes.

3.12.3 24-Hour Urine with Preservatives

- a. Include the designated preservatives in the urine collection container at the start of the collection.
- b. Caution patient that the preservatives may be toxic and caustic, and not to spill or discard the preservatives.
- c. Some urinary constituents such as VMA, Na, K, Cl and Ca vary greatly with diet.

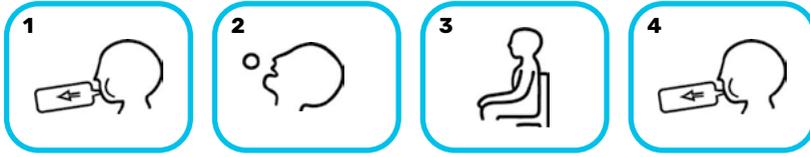

SPECIMEN COLLECTION AND HANDLING

- d. For VMA testing, dietary restriction prior to urine collection is required. Abstain from vanilla, chocolate, coffee, bananas, citrus fruit, salt, aspirin and hypertensive drugs.

3.12.4 Trace Metals Analysis Specimen Collection and Transport

- a. **Serum:** Patients should refrain from taking vitamins, mineral supplements or antacids at least 3 days prior to specimen collection.
- b. **Whole Blood:** Patients should refrain from eating seafood, antacids, or taking mineral or herbal supplements at least 3 days prior to specimen collection.
- c. **Urine:** Patients should refrain from eating seafood, antacids, mineral or herbal supplements at least 3 days prior to specimen collection.

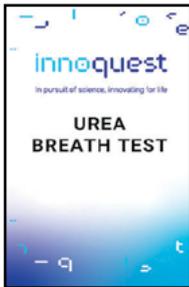

UREA BREATH TEST - HOW TO COLLECT BREATH

<p>Collect 1st baseline sample (fasting is required)</p>	<p>Take the 13C-Urea capsule</p>	<p>Remain seated for 15 mins</p>	<p>Collect 2nd breath sample</p>
<p>Baseline Bag</p>			<p>Sample Bag</p>

No gargling necessary

- * Things to keep in mind when collecting breath**
- At least 6 hours of fasting is required.
 - Hold sample bag against the mouth, breathe in through the nose and hold breath for 5-10 seconds.
 - Breathe slowly into the bag.
 - If you have difficulty holding your breath, make two or three short breaths into the bag instead.
 - When blowing into the bag, make sure to breathe out from the lungs.

Breath Bags

13c Urea Capsule

TEST THAT REQUIRE SPECIAL HANDLING

SN	Type of Test	Special Handling Requirements
1	APTT	Result may be compromised if sample do not reach the lab within 2 hours of blood collection.
2	Homocysteine	EDTA or plain tube kept in ice to maintain the 2-8 deg C temperature,
3	Semen Analysis	<ol style="list-style-type: none"> 1. Semen sample to reach the lab within 2 hours of collection to maintain the integrity and accuracy of examination. 2. Patient to drop off semen sample at our main lab at Ubi Ave 1 StarHub Green is preferred. 3. Patient to collect samples into a clean container through masturbation. 4. Patient should abstain from sexual activity for 2-7 days prior to sample collection. 5. Please write the following information on the request form: <ul style="list-style-type: none"> • Time of collection • Days of abstinence • Any spillage
4	Ammonia	Sample to be kept in ice and sent directly to the Farrer Park Hospital Satellite lab within 30 minute.
5	Urine FEME and urine phase contrast	<p>Mid-stream urine collection</p> <ol style="list-style-type: none"> 1. Label sterile urine container with patient's name, IC or DOB and date of collection. 2. Wash hands with soap and warm water to avoid any contamination during collection. 3. Urinate a small amount first and then collect the rest into the urine container until half full.
6	Gonorrhoea culture	Specimen should not be refrigerated.
7	Food handler test and stool FEME	Record the sequence of the sample collected clearly on the container namely, first sample as Day 1, then Day 2 and Day 3.

CRITICAL VALUES

LIST OF CRITICAL VALUES OF LABORATORY TESTS

Haematology	Low Limit		High Limit	
Haemoglobin (Hb)	6.0 g/dl		20.0 g/dl	
White Blood Cell (WBC)	2.0 x 10 ⁹ /L		25.0 x 10 ⁹ /L	
Platelets (PLT)	50.0 x 10 ⁹ /L		800 x 10 ⁹ /L	
Reticulocyte (Retic)	None		20%	
Prothrombin Time (PT)	None		50 sec	
Activated Partial Thromboplastin Time (APTT)	None		90 sec	
INR	-		4.5	
Peripheral Blood Film (PBF)	Shows leukemic cells (progranulocytic or blast)			
	Shows abnormal leukemoid reaction			
Malaria Parasite (MP)	Positive			
Microfilaria	Positive			
Chemistry	Low Limit		High Limit	
	Conventional Unit (mg/dl)	SI Unit (mmol/L)	Conventional Unit (mg/dl)	SI Unit (mmol/L)
Neonatal Bilirubin	-	-	18	310
Calcium	6	1.5	13	3.25

CRITICAL VALUES

Chemistry	Low Limit		High Limit	
	Conventional Unit (mg/dl)	SI Unit (mmol/L)	Conventional Unit (mg/dl)	SI Unit (mmol/L)
Phosphate	1	0.32	-	-
Glucose	40	2.2	500	27.7
Potassium	-	2.5	-	6
Sodium	-	120	-	160
Chloride	-	80	-	120
Bicarbonate (CO ₂)	-	10	-	36
Immunology/Microbiology				
Dengue IgM/IgG & Dengue NS1	Positive			
hs Troponin I (Female)	>15.5 pg/mL			
hs Troponin I (Male)	>34.1 pg/mL			
Blood Culture	Positive			
CSF Culture	Positive			
CSF & Body Fluids Gram Stain	Positive			
AFB Smears	Positive			

LABORATORY UNITS - CONVERSION FACTORS

These are the conversion factors for laboratory units used in commonly ordered tests.

- For conversion of SI unit to Conventional unit, multiply test value in SI unit by the conversion factor.
- For conversion of Conventional unit to SI unit, divide test value in Conventional unit by the conversion factor.

CONVERSION FACTORS FOR LABORATORY UNITS			
Tests	SI Unit	Conversion Factor	Conventional Unit
Bilirubin	umol/L	0.058	mg/dL
Calcium	mmol/L	4	mg/dL
Cholesterol, Total	mmol/L	38.61	mg/dL
Cholesterol, HDL	mmol/L	38.61	mg/dL
Cholesterol, LDL	mmol/L	38.61	mg/dL
Creatinine	umol/L	0.0113	mg/dL
Glucose	mmol/L	18	g/dL
Iron	umol/L	5.6	ug/dL
Iron Binding Capacity	umol/L	5.6	ug/dL
Magnesium	mmol/L	2.43	mg/dL
Phosphate	mmol/L	3.1	mg/dL
Triglycerides	mmol/L	88.5	mg/dL
Urea	mmol/L	6.006	mg/dL
Uric Acid	umol/L	0.01681	mg/dL
Free T4	pmol/L	0.0777	pg/dL
Free T3	pmol/L	64.94	pg/dL

ORDER OF DRAW

Tube	Cap Colour	Additive	Determinations	Inversion
Sodium Citrate	 Light Blue	Buffered Sodium Citrate 0.109M (3.2%)	PT, APTT, D-Dimer, Lupus Anticoagulant, Anti-Thrombin III, Protein S & C, Fibrinogen, Factor Assay, HLA B27	3-4
Red Top Plain	 Red	Clot Activator Silicone-coated	Cold Agglutinins, Abnormal Blood Group Antibody Screen, Antibody Identification & Vitamin D ² & D ³ (HPLC)	5
Plain	 Gold	Clot Activator and GEL for Serum Separation	Biochemistry, Virology, Immunology, Vit B12, Folate, Anticonvulsant Drug Monitoring, Therapeutic Drug Monitoring (TDM) & other investigations that require serum (i.e. plain blood)	5
Royal Blue Plain	 Royal Blue (Serum)	Trace element (with clot activator)	Zinc, Copper, Aluminium, Selenium	8-10
Lithium Heparin	 Green	Lithium Heparin	STAT Biochemistry, Plasma, Ammonia (in ice-pack), CD34, Blood Alcohol, Toxicological Tests, Chromosomes Studies, Electrolytes, Renal Function Tests, TB Spot	8-10
Lithium Heparin	 Light Green	Lithium Heparin and GEL for plasma separation	STAT Biochemistry, Plasma, Ammonia (in ice-pack), CD34, Blood Alcohol, Toxicological Tests, Chromosomes Studies, Electrolytes, Renal Function Tests	8-10

ORDER OF DRAW

Tube	Cap Colour	Additive	Determinations	Inversion
Royal Blue EDTA	 Royal Blue (K ₂ EDTA)	K ₂ EDTA	Arsenic, Cadmium, Chromium, Mercury, Lead, Manganese	8-10
K ₂ EDTA	 Lavender	Spray-coated K ₂ EDTA	FBC, PBF, MP, ESR, HBA1c, Cyclosporine A, G6PD, RBC Cholinesterase, ACTH, Renin, HB Electrophoresis, Thalassemia Screening, CD4/CD8, Factor V Leiden	8-10
Sodium Fluoride	 Grey	Sodium Fluoride	Glucose, Lactic Acid (in ice-pack)	8-10

- * Blood Culture bottles to be drawn (if required) before blood tubes
- * Trace Element: if using serum trace element tube with clot activator, please collect after serum tubes
- * Use 2 identifiers for patient identification
- * Maximum tourniquet time: not more than one minute
- * Sites to avoid blood drawing: fistula arm, mastectomy site, IV drip or burn sites
- * Always wear a new pair of gloves for different patient
